

AI Philosophy Competition: 1st Edition

[Dark mode]

AI is now exceptionally capable in mathematics and coding. In philosophy, the capabilities of AI are less clear. One reason for this is that there are not any obvious benchmarks by which AI-generated philosophy can be systematically judged. The purpose of this competition is to gauge the philosophical capabilities of AI in a way transparent to the philosophical community.

The Competition

Entrants are invited to submit **up to three original essays** on any philosophical topic, alongside a **methodology report** describing the method of generating the works, in as much detail as possible. There are no restrictions on how to generate the work except that it must be **primarily AI generated**. Minimal human collaboration is allowed. Works that meet this threshold will be judged without prejudice to their method of generation.

Rules

Detailed rules

Max 6k words per submission (so 3 x 6k words per entrant, plus methodology reports). Submissions must not be published or under review elsewhere, and entrants must consent to publication of their submissions and methodology reports online. Entrants may opt-out of having their name attached to their submissions.

Judging

Submissions are judged by the quality and originality of the philosophical content. Style is not graded. If the number of submissions is high, submissions will be passed through an initial AI screening. Winners will be decided by a panel of academic philosophers. All judging will be blind to methodology reports and authorship.

Publication

All submissions and methodology reports will be made generally available after winners are announced. Finalists will receive comments from the panel of judges. Members of the general philosophical community will be invited to rate each submission, to make the opinions of the community generally known.

Prizes

1st place: US\$3,000. 2nd place: \$2,000. 3rd place: \$1,000. An additional \$5,000 for creative methodology, to be distributed as the judge committee sees fit.

Key Dates

Submission deadline

October 31, 2026

Finalists announced

Early December 2026

Results announced

End of January 2027
